

Firefox Browser

Mozilla Firefox or simply Firefox, is a free and open-source web browser developed by the Mozilla Foundation and its subsidiary, the Mozilla Corporation.

Open source means anyone can download and edit the source code (with limitations).

Firefox uses the Gecko layout engine to render web pages.

Firefox is officially available for Windows 7 or newer, macOS, and Linux. Unofficial ports are available for various Unix and Unix-like operating systems including FreeBSD, OpenBSD, NetBSD, illumos and Solaris Unix. It is also available for Android and iOS.

Enough history – lets check out the browser features

This month I'll be uploading my presentation notes as a separate file.

They are just short reminders of what I wanted to cover in this presentation.

Future Topics

September About Android

October Creating a Wordpress Website

THANKS FOR LISTENING 😊
